

Create a production-grade, mobile-first HTML gym tracker web app named “Tony Gym Schedule” with a premium UI/UX. Deliver a single optimized .html file only. No explanations, no placeholders, no demo data, no comments, and no unnecessary text. CORE REQUIREMENTS: Build a complete 5-day gym workout tracker. Use only these colors: black, yellow, orange, white. Primary theme: black background with orange/yellow highlights. Typography: Segoe UI only. Modern premium fitness app aesthetic. Responsive for iPhone and Android. Smooth UI, rounded cards, shadows, spacing, clean alignment. Professional-level UI equivalent to top fitness tracking apps. LAYOUT: Top section: App title: “Tony Gym Schedule”

12-month selector tabs/buttons. Current month highlighted. Main dashboard: Monthly workout calendar view with minimum 30 days. Each day must display: Day number Day name Workout type Completion checkbox Weekly structure: Monday: Workout Tuesday: Workout Wednesday: Rest Day Thursday: Workout Friday: Workout Saturday: Workout Sunday: Rest Day WORKOUT TRACKING: Every workout day must contain FULL exercise lists. Include realistic exercises for: Chest Back Shoulders Arms Legs Core Minimum 6–10 exercises per workout day. Every exercise must contain: Exercise name Weight input Reps input Sets input Notes field Inputs must autosave instantly after typing. TRACKING FEATURES: Persist all data automatically using local storage. No save button required. Store and display previous

workout history. Show last 5 entries for: Weight Reps Sets History must appear directly below current inputs. Allow progress comparison between sessions. PERMISSIONS: Include access modes: Read Write Admin Admin mode can edit all workout structures. Read mode disables editing. Write mode allows normal tracking. UI/UX REQUIREMENTS: Premium dashboard layout. Animated hover states. Smooth transitions. Sticky navigation. Mobile bottom navigation. Expandable workout cards. Progress indicators. Completion percentage. Workout streak counter. Clean modern cards. High readability. No clutter. No external frameworks unless absolutely necessary. Optimize loading speed and responsiveness. TECHNICAL REQUIREMENTS: Deliver only one self-contained .html file. Inline CSS and

inline JavaScript only. Fully functional offline. No backend. No dependencies. No broken layouts. No lorem ipsum. No fake buttons. No incomplete sections. No missing workout days. All features must function immediately on open. OUTPUT FORMAT: Return only the final complete .html code. Do not explain anything. Do not add markdown explanations. Do not summarize features. Do not output partial code. The result must be directly usable as a production-ready fitness tracker web app. Make sure that the weight and rep and set is editable and give me 5 working sets atleast. NOTE PLEASE: DO NOT ADD EXERCISE FROM YOUR END. USE THE SCHEDULE ONLY. You should be able to show me the previous 5 last entries after the comment section automatically and save the latest 5 entries on that. Make it save the data for the whole month and

because it would be require to get the progress in terma of line graph at the end of the month
